PORT TOWNSEND MARINE SCIENCE CENTER • FORT WORDEN STATE PARK

Remarkable Residents

By Alison Capener
PTMSC Home Crew Volunteer

Let's get acquainted with a pair of nesting birds not always associated with a marine environment. But there's no question that this pair depends mightily on its catch from these environs, be it fish (preferably salmon), or marine birds such as ducks or gulls, or leftovers from the fish-cleaning (heads, guts, etc.) of local sport fishers.

This large and dramatic pair nests nearby in the woods of Fort Worden, overlooking the Chinese Gardens Lagoon and North Beach. They can often be seen hunting the shoreline between the Point Wilson light and North Beach or "on watch" from favored trees. Sometimes one even hunts from the big buoy in the rough water off the lighthouse.

If you visit North Beach or Fort Worden for your walks, you know I'm writing about our elegant pair of resident bald eagles. This pair, fondly referred to as "Kah" and "Tai," have been monitored for the state wildlife department for going on eight years by a local resident sometimes know as "Eagle Bob" Capener.

It's late February as I write this, and the pair are together now. They have an earlier nesting schedule than most other pairs in

the vicinity, and can be seen renovating their huge nest, commonly a mid-January to late February activity. This is also the time to witness their awesomely beautiful "pas de deux" as they soar together above the cliffs and forest! Last year, Mom Eagle began incubating eggs, tucked firmly down into the nest, on February 28th. She's been documented previously as beginning this daunting activity from the end of February to the second week in March. She rarely leaves the nest at this time and Dad Eagle hunts for two, bringing her food to the nest. Once in a

rare while, he will take over the business of sitting securely on the egg(s) so she can fly a bit, stretch and hunt. The chicks, one or two, hatch in 30-32 days. The first chick almost always gets a head start over the second, and is thus the larger of the pair, and more assertive. Sadly, this often dictates the death of the younger chick. Since 1997, Kah and Tai have successfully fledged two chicks once and one chick four times. They have added six chicks in seven years to the local bald eagle population! Good for them! In 2001, Washington State documented

MARK YOUR CALENDARS!!
MARINE EXHIBIT OPENING DAY
SATURDAY, APRIL 3, 2004

Come see what the tide brought in!
The Marine Exhibit features animals of the nearshore—those living in kelps, eelgrass, on and around pilings and on the rocks.
Spring hours at the Marine Exhibit are Saturdays and Sundays noon to 4 pm.

Stewardship Opportunity for Boaters

Starting in early May, boaters will have a chance to do their part in protecting eelgrass along the Port Townsend waterfront. As shown in the map on the right, eight seasonal markers will be installed between the ferry terminal and Point Hudson. These buoys, bearing the voluntary “no anchor” logo, delineate the deep edge of the eelgrass meadow. When possible, boaters are asked to anchor outside of that area for the safety of their boats and for eelgrass protection. On shore, attractive informational signs will be posted at water access sites, informing boaters and the general public why anchoring outside the eelgrass is a recommended practice.

This innovative protection method is something Port Townsend can be proud of. Let's see if it takes hold in other places around the Sound and Straits. For more information or to volunteer with boater outreach, sign and buoy installation/removal or underwater monitoring, contact Michelle McConnell at (360) 385-5668.

This pilot project is sponsored by the Jefferson County Marine Resources Committee and is funded by the Northwest Straits Marine Conservation Initiative.

NEW ADMISSION RATES

Starting April 3rd, when both the *Marine Exhibit* and *Natural History Exhibit* are Open

NON-MEMBERS ADMISSION FEE

Adult \$5 Youth 6-17 \$3 5 & under Free

(continued from page 1)

614+ nesting pairs of bald eagles, compared to 1963, when only 417 pairs total were documented in all of the lower 48 states.

Throughout the spring and summer, Kah and Tai are very busy feeding chicks, protecting them from the elements, and giving them flying lessons. Both parents participate in these activities, though when “Junior” is big enough and hungry enough to become grabby and demanding, Dad Eagle often brings food to the nest and insists that Mom does the serving. By the next issue of *Octopress*, we will have an update on this year's nesting, with more interesting (and humorous) aspects of life in and around the Fort Worden eagles' nest.

Stay tuned.

Welcome to Our New Staff

Alice King: Call the office these days and you might hear a new voice. Alice King joined us this month and is job sharing with Marilyn Friedrich. Both serve as receptionist and administrative assistant. Alice is a long-time resident of Port Townsend. Stop by and say hello.

Alison Ward is our spring intern. She will be on staff April 1–June 15. She has a B.A. in Biology, with an emphasis on Ecology, from the University of Montana. Prior to coming here she'd been an intern with the Student Conservation Association, working in Oregon. Alison will serve as an educator in both exhibits.

A new Natural History Educator will be starting soon.

Octopress is a quarterly publication of the Port Townsend Marine Science Center, A 501(C)(3) nonprofit educational organization. Your comments, contributions, and support are greatly welcomed and appreciated. PTMSC is located at Fort Worden State Park in Port Townsend, Washington on the Olympic Peninsula.

Eelgrass Restoration Project at NW Maritime Center Site

“The Science of Eelgrass” Forum

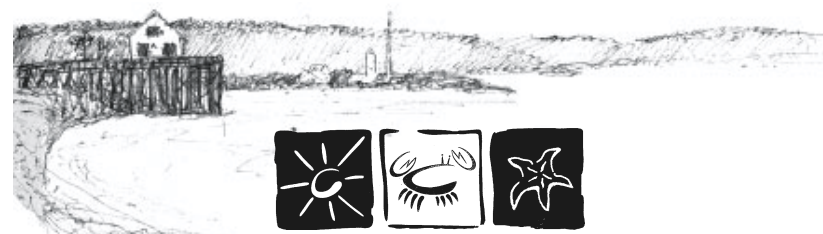

The PTMSC is collaborating with the Northwest Maritime Center and Battelle Marine Sciences Laboratory to offer a free public forum on eelgrass Friday, April 9th from 7–8:30 pm at the Pope Marine Park Building in Port Townsend. Timed one month before the eelgrass restoration project at the new Maritime Center dock, this forum features experts Ron Thom of Battelle and Charles “Si” Simenstad of the University of Washington's School of Aquatic and Fishery Science. They will discuss eelgrass science, restoration, fisheries and ecology. A Q&A session will follow.

Volunteer Training for Eelgrass Planting

We are seeking 100 volunteers to help plant 5,000 shoots of eelgrass at the NWMC site! This is a rare opportunity for you to wet your hands in a habitat restoration project in your own neighborhood and watch its effects for years to come.

Planting will take place every day from Saturday, May 8th through Wednesday, May 12th. Volunteers may sign up for any portion of this 5-day period and will be stationed outdoors on the NWMC site, preparing the shoots of eelgrass for planting by divers.

Interested volunteers must sign up with Jean Parker at jparker@ptmsc.org or (360) 385-5582 ext. 112, and attend one of two volunteer training sessions, 9–10:30 am or 10:30–noon, at the PTMSC's Natural History Building in Fort Worden on Saturday, May 1st.

Eighth Annual Low Tide Fest Coming July 3rd!

The Eighth Annual PTMSC Low Tide Fest on July 3rd promises to be the best yet! We will celebrate *Life on the Edge*—here on the edge of Puget Sound and on the edge of the 21st century. We will explore the edges of our rich natural world, the shoreline edge and the forest edge. We will look at the people and organizations that work and play on the edge. We will take a look back at the changes this edge of the continental United States has seen during the last two centuries and at the challenges the next century will bring. We will have an opportunity to learn how to keep our special edge of the world alive and healthy into the next century.

The Low Tide Fest kicks off at 9 am again this year to take advantage of the 11:17 am -3.7 foot tide, giving us more time for our very popular naturalist-led beach walks. In addition to walks the day of the Fest, we are planning a low tide walk the day before at the new Northwest Maritime Center dock site, where volunteers are working to restore the eelgrass habitat.

During Low Tide Fest, we offer activities at all the Port Townsend Marine Science Center venues—the beach, the pier, the dock, in tents, as well as in our Marine & Natural History Exhibit buildings. There will again be Kid's Activities including Fish Printing—with an opportunity for adults to join in and discover their artistic talents! We will have live music all day—with local musicians and a few surprises—and the popular sand sculpture contest returns. Many of our talks and workshops will focus on this year's theme, *Life on the Edge*, with a visit by one of the research boats that works here on the edge.

Low Tide Fest 2004 is a “don't miss” activity for all our members—and for even more fun, give us a call and volunteer to help out on this special day—the only folks who have a better time than the many visitors are our volunteers. Give yourself an edge: call volunteer coordinator, Jean Parker at 385-5582 ext. 112.

A Special Thank You

To **Mariner Bank, Skookum and First Federal Savings and Loan** who each donated funds to us for support of “The Big One: Earthquakes in the Pacific Northwest.” These donations allowed schools in the area to bring students to the exhibit who otherwise would not have been able to see this exhibit. Over 450 students and their chaperones visited the exhibit during January *The Big One* and February.

What's New at the Burke Museum

Coming to the Burke Museum later this month is a new exhibit called *Dinosaurs of Darkness*, on display from March 25–October 20, 2004.

Dinosaurs of Darkness is a riveting international touring exhibit featuring recently discovered dinosaurs that lived in the extreme polar regions of the globe—where darkness reigned in winter and temperatures plunged below freezing. Learn about the unusual dinosaurs of Antarctica, Australia, New Zealand, Alaska, and South America when *Dinosaurs of Darkness* comes to the Burke Museum in Seattle this spring.

This is the first touring exhibit on polar dinosaurs. It kicks off the Burke's "Year of the Fossil," a twelve-month program on paleontology and fossil education. The exhibit was created by the Monash Science Center in Melbourne, Australia. For more information about *Dinosaurs of Darkness* and other events at the Burke, go to www.washington.edu/burkemuseum.

Peninsula College Class—Introduction to Marine Biology

This six-week course taught at PTMSC's Marine Exhibit is a marine studies program with an emphasis on Puget Sound. Subjects include plankton, marine food webs, animal identification, native animal phyla and seaweed, beach sampling and a low tide exploration. Students who complete this program are qualified to be PTMSC Exhibit Docents. The class takes place at the PTMSC Marine Facility.

Class Dates & Time: Sat., April 17–May 22, 9 am–12 noon.
Cost: \$40 payable to Peninsula College. Additional fees for books and materials will be collected in class.
To Register: Contact Peninsula College, 181 Quincy, Port Townsend. For info. call Peninsula College at 384-4605.

Many Thanks to ...

- ✂ David Conklin for getting the iMac Glacier program in the Natural History Exhibit up and running again. He donated both his time and the computer parts.
- ✂ Dan Darrow who donated a PC projector.
- ✂ Cliff Ross for the donation of an office chair.
- ✂ The family of David Domogalia who donated a shell and coral collection.
- ✂ Owen Fairbank who fixed our intern bicycle, many thanks.
- ✂ The Pizza Factory for donating a plastic serving tray and other items to "The Big One" Earthquake exhibit.
- ✂ Olympic Printer Resources, Inc. for donating a laser printer for our staff.
- ✂ Penn Cove Mussel Co. for 25 pounds of mussels for feeding grateful sea stars.
- ✂ Kim Maxwell and Judy D'Amore for donating books to the PTMSC library.
- ✂ Sandy MacNair for his donation of a computer printer and scanner for our staff.
- ✂ Terry Fogerson of Terry's Lock and Safe, for donating time to help us re-key our cabinets in the Natural History Exhibit.
- ✂ Susan Skubinna for her cash donation for special "Wish List" purchases.
- ✂ Richard Berg for providing sketches for the proposed Discovery Lab.

Marine Science Summer Camps

The Port Townsend Marine Science Center offers a variety of weeklong camps centered around the marine environments of Port Townsend Bay and the Strait of Juan de Fuca.

In Rock 'n Fossil Day Camp, campers will explore geology of the shoreline and life history of the animals living there. Campers will build skeletons of marine mammals, learn about the mysteries of the bluff and make connections between fossil animals and the animals of today. From experiments in the learning lab exploring hydrothermal vents to field sessions on the beach studying beach rocks and sand—this camp offers fun, hands-on experiential learning.

In Marine Science Overnight and Day Camps, campers are immersed in scientific study, creative activities and respectful play. Activities include sieving through goopy sediments looking for brittle stars, pulling a seine net through eelgrass beds to learn where young fish hide and observing microscopic life that supports all life in the sea. These activities give campers the opportunity to learn about individual groups of marine plants and animals while taking an ecosystem approach to marine study.

2004 SESSIONS

Marine Science Day Camp	July 12th–16th	\$180	For ages 8–12
Rock 'n Fossil Day Camp	August 2nd–6th	\$180	For ages 9–14
Marine Science Overnight Camps	July 25th–31st & August 8th–14th	\$575	For ages 9–13

Early registration is recommended. Reservation is made upon receipt of deposit. A limited number of scholarships are available through the Seth Bender Memorial Scholarship Fund. This fund is sponsored by individual contributions and by the Washington Foundation for the Environment.
